Product	Crop	Dose (ha) / Dilution in water (ha)	Application
Yogen 2	Leafy vegetables	2kg / 400 to 600 l of water	Fortnightly applications, starting 7 to 10 days after germination or transplant, during the vegetative period
	Cucumber and other cucurbits	2 to 3kg / 400 to 600 l of water	Fortnightly applications, starting 10 to 15 days after germination or transplant, during the vegetative period
	Tomato and other solanaceous crops	2 to 3kg / 400 to 600 l of water	Fortnightly applications, starting 15 days after germination or transplant, during the vegetative period
Yogen 5/ Yogen 6	Potato	2kg / 200 to 400 l of water	2 applications during the vegetative stage and 1 application after the start of tuberization
	Coffee	3 to 4kg / 300 to 500 l of water	3 to 4 applications between September and March
	Beans	2 to 3kg / 100 to 200 l of water	2 pre-flowering applications and 2 post-flowering applications
	Vegetables	1kg / 100 to 200 l of water	Weekly applications
	Producing Citrus	3 to 4 kg / 2000 l of water	2 pre-flowering applications and 2 post-flowering applications
	Corn	2 to 3kg / 100 to 200 l of water	2 applications, between 2 and 4 leaves
	Soybean	2 to 3kg / 100 to 200 l of water	1 pre-flowering application and 1 post-flowering application
	Oats, Barley, Wheat	2 to 3kg / 100 to 200 l of water	1 application during tillering and 1 during the flag leaf stage
Yogen Coffee	Coffee	3 to 4kg / 300 to 400 l of water	3 to 4 applications between September and March
Yogen Citrus	Citrus	3 to 4 kg / 2000 l of water	2 to 3 applications between September and February
Yogen K-40	Potato	2kg / 600 to 800 l of water	2 applications, the 1st application at the beginning of the tuber filling phase and the 2nd application 7 to 10 days after the first
	Soybean	2 kg / 100 to 200 l of water	1 application at the R3 and R5 phenological stage
	Corn	2kg / 100 to 200 l of water	1 application at the tasseling phase (R1)
	Beans	2kg / 100 to 200 l of water	1 application at the R7 phenological stage
Yogen Phós	Wheat	2kg / 100 to 200 l of water	1 post-flowering application
	Potato	2kg / 600 to 800 l of water	Application 10 days after hilling
	Soybean	2 kg / 100 to 200 l of water	1 application at the V5 and V7 phenological stage
	Beans	2 kg / 100 to 200 l of water	Foliar application at the V4 stage
Yogen Soy/ Yogen Mn 10	Soybean	2 to 3 kg / 100 to 200 l of water	1 pre-flowering application and 1 post-flowering application
Yogen 14	Corn	1.5 to 2kg / 100 to 200 l of water	2 applications, between 4 and 8 leaves
	Pasture	1.5 to 2kg / 100 to 200 l of water	2 applications, the first right after sprouting and the second 60 days after the first
	Oats, barley, and wheat	1.5 to 2kg / 100 to 200 l of water	1 application during tillering
Yogen N34	Sugarcane	5 to 10 kg / 100 to 300 l of water	In a single application or split into 3 times, between the months of November and February, when the plant is in full vegetative development
Yogen 7	Coffee	3 to 4kg / 300 to 500 l of water	3 to 4 applications between September and March
	Vegetables	1kg / 100 to 200 l of water	Weekly applications
	Citrus	3 to 4 kg / 2000 l of water	2 to 3 applications between September and February
	Soybean	2 to 3kg / 100 to 200 l of water	1 pre-flowering application and 1 post-flowering application

## PRODUCT ADVANTAGES:

Provides macro and micronutrients to supplement fertilization provided via soil in a safe and high-quality manner. It has various formulations to adapt to the different phases of the crops.
